SUBJECT INDEX

A

A-DNA
Infrared linear dichroism
Normal mode vibration calculation, 15, 27
Transition dipole moment calculation, 15
Nucleic acid backbone
Displacement vectors, 27
Infrared linear dichroism, 15
X-ray diffraction, 15

Acetamide, *N*-methyl
Peptide-ion binding
Lithium ion, 503
Sodium ion, 503

Acetic acid permeation
Mechanism
Nuclear magnetic resonance, 1
Phospholipid membranes
Pseudoequilibrium conditions, 1
Total line shape analysis
Selective population transfer, 1
Unilamellar vesicles
Nuclear magnetic resonance, 1

Acetylcholine receptors
Triton X-100
Neutron scattering, 473
Shape analysis, 473

Adenosine triphosphate
Muscle, skeletal
Force-velocity curves, 241

Anesthetic mechanisms
Benzyl alcohol
Chloroform, 259
Membrane model systems, 185
Transition temperature, 185

Axon, giant
Myxicola
Prolongation of excitability, 357
Salt solution dispersal, 357

B

B-DNA
Infrared linear dichroism
Normal mode vibration calculation, 27
Nucleic acid backbone
Displacement vectors, 27
Infrared linear dichroism, 15
X-ray diffraction, 15

Bacteriorhodopsin
Chromophore
Dark equilibria, 211

Benzyl alcohol
Chloroform
Anesthetic mechanisms, 259
Membrane model systems
Anesthetic mechanisms, 185

Bilayer membranes
Autocorrelation analysis
Current noise, 511
Capacitance
Conductance, 259
Dipicrylamine
Current noise, 511
Fluorescence photobleaching
Laser beam, 281
Multipoint analysis, 281
Nuclear magnetic resonance
Biased rotation, 327
Orientational order
Nuclear magnetic resonance, 327
Phosphatidylcholine, dipalmitoyl
Structure, determination method, 413
X-ray scattering, 413
X-ray scattering
Uranyl-ion label, 413

Brain neoplasms
DNA
Viscoelasticity, 93

C

Chloroform
Benzyl alcohol
Anesthetic mechanisms, 259

Chromophore
Bacteriorhodopsin
Dark equilibria, 211
Structural model
Ion binding, 211
Vitamin A
Rhodopsin, 447

Computer simulation
Energy transfer
Forster method, 197

Correction, 167, 375

D

Deoxythymidine triphosphate
DNA synthesis
Escherichia coli, 65

Diastolic mechanics
Ventricle
Mathematical model, 143
Pressure-volume relations, 143

Dimer excision
Ultraviolet rays
DNA repair, 315

Displacement vectors
A-DNA
Nucleic acid backbone, 27
B-DNA
Nucleic acid backbone, 27

DNA
Brain neoplasms
Viscoelasticity, 93
Viscoelasticity
Detergent lysis, 93
Gamma radiation, 93
Hydrodynamic radius, 93
Hydrogen-ion concentration, 93

DNA-histogram
Flow cytometer
Fluorescence microscope, 33

DNA repair
Ultraviolet rays
Dimer excision, 315

DNA synthesis
Deoxythymidine triphosphate
Escherichia coli, 65
DNA-thymine
Labeling kinetics, 65

DNA-thymine
DNA synthesis
Labeling kinetics, 65

E

Eigenvectors
see Displacement vectors

Electric tissue
Acetylcholine receptors
Neutron scattering, 473
Shape analysis, 473
Torpedo californica, 473

Electrical properties
Ventricle
Chick embryo, 169

Endosperm
Water diffusion
Nuclear magnetic resonance, 133
One-dimensional model, 133
Wheat germ, 133

Energy transfer
Computer simulation
Forster method, 197
Nonradiative, two-dimensional
Analytic theory, 197

Escherichia coli
DNA synthesis
Deoxythymidine triphosphate, 65

F

Flow cytometer
Fluorescence microscope, 33
DNA-histogram, 33
New flow configuration
Instrument description and performance, 33

Fluorescein
Mitochondria
Emission polarization, 403
Liver cells, rat, 403

Fluorescein excitation
Leukocytes
Emission polarization spectra, 372
Lymphocytes
Emission polarization spectra, 369
Phytohemagglutinin, 369
Polarization shifts, 369
Polarization shifts
HeLa S3 cells, 372
Leukocytes, 372
Phytohemagglutinin, 372

Fluorescence microscope
Flow cytometer
DNA-histogram, 33
New flow configuration, 33

Fluorescence photobleaching
Bilayer membranes
Laser beam, 281
Multipoint analysis, 281
Membranes, gram-negative bacteria
Laser beam, 281
Multipoint analysis, 281

G

Gamma radiation
DNA
Viscoelasticity, 93

Growth
Magnetic field, static
Lebistes reticulatus, 305

H

Heart-cell clusters
Interbeat interval

Heart-cell clusters (cont'd)
Ventricle, 377

Hydrogen-ion concentration
DNA
Viscoelasticity, 93

I

Infrared linear dichroism
A-DNA
Normal mode vibration calculation, 15, 27
Nucleic acid backbone, 15
Transition dipole moment calculation, 15
B-DNA
Normal mode vibration calculation, 27
Nucleic acid backbone, 15

Interbeat interval
Heart-cell clusters
Ventricle, 377
Video monitoring, 377

Intracellular diffusion
Skeletal muscle
Water diffusion, 107

Ion probe transport
Bilayer membranes
Anesthetic mechanisms, 259

L

β-Lactoglobulin
Protein-polyene complex
UV absorption, 447

Lecithins
Lipid bilayers
Phase transition model, 117

Leukocytes
Fluorescein excitation
Polarization shifts, 372

Life cycle
Magnetic field, static
Lebistes reticulatus, 305

Light diffraction
Striated muscle fiber
Chemically skinned, glycerinated and intact fibers, 45
Diffraction line intensity, 45
Sarcomere length, 45

Lipid bilayers
Lecithins
Phase transition model, 117
Protein
Phase diagrams, 117
Thermodynamics
Phase transition model, 117
Scaled particle theory, 117

Lithium ion
Peptide-ion binding
Acetamide, *N*-methyl, 503

Lymphoblasts
Radiation tolerance
Growth rate, 81
Sublethal radiation
Division delay, 81
Hereditary effect, 81

Lymphocytes
Fluorescein excitation
Emission polarization spectra, 369
Polarization shifts, 369

M

Magnetic field, static
Life cycle
Lebistes reticulatus, 305

Membrane impedance
Pacemaker voltage
Noise analysis, 169
Ventricle
Chick embryo, 169

Membrane model systems
Benzyl alcohol
Anesthetic mechanisms, 185
Capacitance
Benzyl alcohol, 185
Tetradecane
Transition temperature, 185

Membrane permeability
Skeletal muscle
Water diffusion, 107

Mitochondria
Fluorescein, 403
Emission polarization, 403
Liver cells, rat
Resting *vs* active conformation, 403

Muscle contraction
Force-velocity curves
Isometric/isotonic model, 241

Muscle, skeletal
Actin-myosin-nucleotide interactions
Isometric/isotonic model, 241
Adenosine triphosphate
Force-velocity curves, 241
Elastic properties
Skinned mineral oil preparation, 391
Sarcomere length
Osmotic pressure, 391
Polyvinylpyrrolidone, 391
Skinned mineral oil preparation, 391
Water
Activation energy, 293
Mouse, female ARS HA(ICR)f, 293
Temperature dependence, 293

Myelin
Kinetics
Sciatic nerves, *Bufo marinus*, 231

Myxicola
Axon, giant

Myxicola (cont'd)
Prolongation of excitability, 357
Salt solution dispersal, 357

N

Natural/deuterated muscle, mouse
Nuclear magnetic resonance
Multiwindow analysis, 339

Nerves
Sodium channel
Kinetics, 363
X-ray diffraction
Divalent cations, 231

Neural network
Boundary effects
Mathematical model, 423
Response, prediction method, 423
Retina, *Limulus*
Boundary effects, 423

Nuclear magnetic resonance
Bilayer membranes
1,2-Dipalmitoyl-*sn*-glycero-3-phosphocholine 327
Endosperm
Water diffusion, 133
Natural/deuterated muscle, mouse
Multiwindow analysis, 339
Proton local fields, 339
Orientational order
Bilayer membranes, 327
Skeletal muscle
Water diffusion, 107
Water diffusion
Peroneus, 107
Sartorius, 107
Semitendinosus, 107

Nucleic acid backbone
A-DNA
Displacement vectors, 27
Infrared linear dichroism, 15
X-ray diffraction, 15
B-DNA
Displacement vectors, 27
Infrared linear dichroism, 15
X-ray diffraction, 15

O

Optic neurons
Retina, *Limulus*
Response, prediction method, 423

Orientational order
Biased rotation
Mathematical model, 327
Bilayer membranes
Nuclear magnetic resonance, 327

P

Pacemaker voltage
Membrane impedance
Noise analysis, 169

Peptide-ion binding
Complete neglect of differential overlap (CNDO) method
Molecular orbital calculations, 503
Lithium ion
Acetamide, *N*-methyl, 503
Sodium ion
Acetamide, *N*-methyl, 503

Phosphatidylcholine, dipalmitoyl
Bilayer membranes
Structure, determination method, 413
X-ray scattering, 413

Phospholipid membranes
Acetic acid permeation
Pseudoequilibrium conditions, 1

Polarization shifts
Fluorescein excitation
HeLa S3 cells, 372
Leukocytes, 372
Lymphocytes, 369
Phytohemagglutinin, 372

Pressure-volume relations
Ventricle
Diastolic mechanics, 143
Fiber extension, 143

Protein
Lipid bilayers
Phase diagrams, 117

Protein-polyene complex
β-Lactoglobulin
UV absorption, 447
Vitamin A
UV absorption, 447

Purple membrane
see Bacteriorhodopsin

Q

Quantum yield
Energy transfer
Nonradiative, two-dimensional, 197

R

Radiation recovery
Ultraviolet rays
Human fibroblasts, 315

Radiation repair
X-radiation
Cell cycle, 497
Chinese hamster ovary cells, 497
Dose-fractionation, 497

Radiation tolerance
Growth rate
L5178 cells, 81

Reproduction
Magnetic field, static
Lebistes reticulatus, 305

Retina, *Limulus*

Statement of Ownership, Management, and Circulation required by Act of 12 August 1970; Section 3685, Title 39, United States Code: *Biophysical Journal*. Published monthly by The Rockefeller University Press at 1230 York Avenue, New York 10021 for the Biophysical Society, Washington, D.C. 20007. Editor: V. Adrian Parsegian, P.O. Box 30239, Bethesda, Md. 20014. Owned by the Biophysical Society, Washington, D.C. 20007, nonprofit corporation, authorized to mail at special rates. Purpose, function, and nonprofit status of the organization and the exempt status for Federal income tax purposes have not changed during the preceding 12 months. The following statistics represent the average number of copies for each issue during the preceding 12 months: copies printed for each issue, 2439; sales through dealers, street vendors, counter sales, 0; mail subscriptions, 1849; total paid circulation, 1849; free subscriptions, 36; office use, left-over, unaccounted for, spoiled, 554; net press run, 2439. The following statistics represent the actual number of copies of the single issue published nearest to date of filing: copies printed, 2300; sales through dealers, street vendors, counter sales, 0; mail subscriptions, 1997; total paid circulation, 1997; free subscriptions, 39; office use, left-over, unaccounted for, spoiled, 264; net press run, 2300. Single issue nearest filing date, October 1979.
